Task:

1.From TypeScript Call Api in the C# delete book via Api

–after the deletion call the fetchallbook to and print the all the book using the for each loop

Solution:

TypeScript Code:

```
async function Fetchallbook() {
    //const reponse = await
    fetch("http://localhost:5211/Book/FetchAllNewBook",{ method: "POST"});
    const reponse = await fetch("http://localhost:5211/Book/GetAllBooks");

    if(!reponse.ok){
        console.log("Error Occurred");
    }

    //const server_response = await reponse.json();
    var book:BookDetail[] = await reponse.json();

    // for(var i=0;i<book.length;i++){
    //     console.log(book[i].title);
    // }

    //console.log(book);

    for(let num of book){
        console.log(num.title);
    }
}

// Fetchallbook();

interface Book_dea{
    authorName :string;
```

```

    bookTitle:string;
    price :number;
}

const newbook:Book_dea={
    authorName : "Praveen",
    bookTitle : "HOW to Win Firends",
    price : 121
}

async function AddnewBook() {
    const reponse = await fetch("http://localhost:5211/Book/AddNewBook",{
method: "POST",
    body:JSON.stringify(newbook),
    headers:{
        "Content-Type" : "application/json",
    }
    });

    if(!reponse.ok){
        console.log("Error Occurred");
    }

    console.log(reponse);
}

// AddnewBook();

interface login{
    name:string;
    password:string
}

const adminuser :login={
    name : "Naren",
    password: "pass"
}

```

```

let token:string;

async function login(callback_func:()=>void){
    const reponse = await fetch("http://localhost:5142/User/Login",{
method : "POST",
    body : JSON.stringify(adminuser),
    headers:{
        "Content-Type" : "application/json",
    }
    });

    if(!reponse.ok){
        console.log("Error Occurred");
    }
    const resp_txt = await reponse.json();
    token = resp_txt.token
    callback_func();
    //console.log(token);
    console.log(`Responce : ${reponse.status} and token is
${resp_txt.token}`);
}

//login(ViewStateinfo);

async function ViewStateinfo() {
    const reponse = await fetch("http://localhost:5142/State/GetStates",{
    headers:{
        "Content-Type" : "application/json",
        'Authorization' : `Bearer ${token}`
    }
    });

    if(!reponse.ok){
        console.log("Error Occurred");
    }

    console.log(reponse.status+" this from another method");
}

```

```

}

interface BookDetail{
    id:number,
    title:string,
    author:string,
    publishdate:string,
    genre:string,
    price:number
}

async function Fetchallbook() {
    //const reponse = await
    fetch("http://localhost:5211/Book/FetchAllNewBook",{ method: "POST"});
    const reponse = await fetch("http://localhost:5211/Book/GetAllBooks");

    if(!reponse.ok){
        console.log("Error Occurred");
    }

    //const server_response = await reponse.json();
    var book:BookDetail[] = await reponse.json();

    // for(var i=0;i<book.length;i++){
    //     console.log(book[i].title);
    // }

    //console.log(book);

    for(let num of book){
        console.log(num.title);
    }
}

async function DeleteBookbyId(id:number) {
    const reponse = await
    fetch(`http://localhost:5211/Book/DeleteBook/${id}`, {method:"Delete"});
    if(!reponse.ok){
        console.log("Error Occurred");
    }
}

```

```

    }

    console.log(response.status+" Deleted Successfully");

    Fetchallbook();
}

DeleteBookById(4);

```

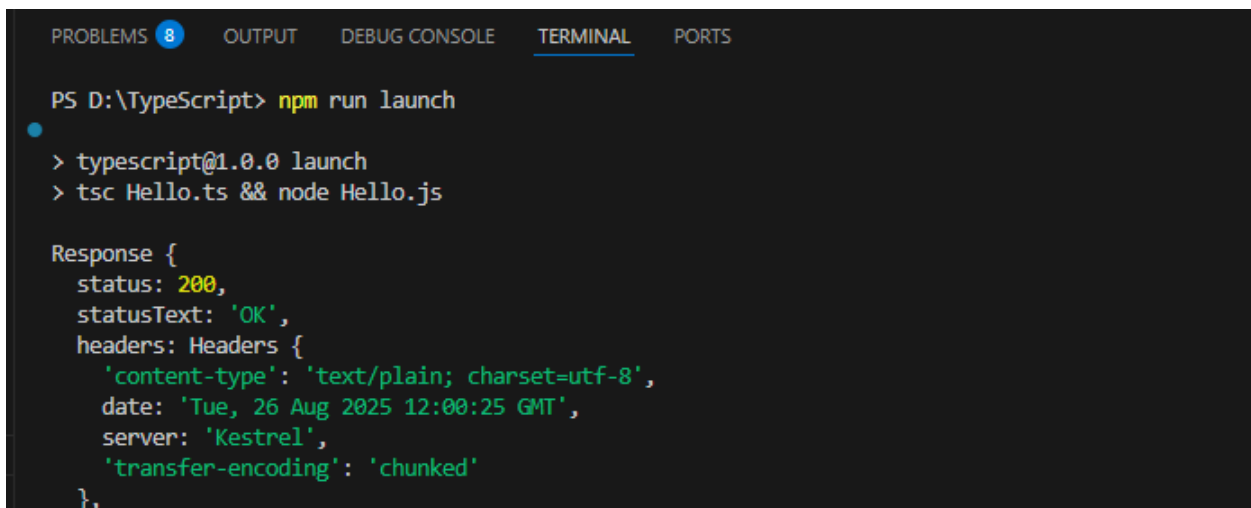

C# Code :

```

[HttpDelete("DeleteBook/{id}")]
public IActionResult DeleteBook(int id)
{
    var result = _bookService.DeleteBook(id);
    return result == "Book deleted successfully" ? Ok(result) : NotFound(result);
}

```

Output:

```
