

Name : Narendra Kumar S

Date : 24-07-2025

Task:

1. Write a python program which defines a function to find maximum of 3 numbers Read the numbers as input and pass as argument to the function.

Solution:

```
def find_max(a, b, c):  
    return max(a, b, c)  
  
num1 = input("Enter first number: ")  
num2 = input("Enter second number: ")  
num3 = input("Enter third number: ")  
  
num4 = find_max(num1, num2, num3)  
print("The maximum number is:", num4 )
```

Output:

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  
PS C:\Users\narendrakumar.s\Desktop\website> & "C:/Program Files/Python312/python.exe" c:/Users  
Enter first number: 45  
Enter second number: 78  
Enter third number: 91  
The maximum number is: 91.0  
PS C:\Users\narendrakumar.s\Desktop\website> |
```

2. Write a python program to read string as input and check whether it is a palindrome.

Solution:

```
def is_palindrome(s):  
    s = s.lower()  
  
    left = 0  
    right = len(s) - 1  
  
    while left < right:  
        if s[left] != s[right]:  
            return False  
        left += 1  
        right -= 1  
    return True  
  
text = input("Enter a string: ")  
if is_palindrome(text):  
    print("It is a palindrome ")  
else:  
    print("It is NOT a palindrome ")
```

Output:

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  
PS C:\Users\narendrakumar.s\Desktop\website> & "C:/Program Files/Python312/python.exe" c  
ome  
Enter a string: Madam  
It is a palindrome  
PS C:\Users\narendrakumar.s\Desktop\website> █
```

3. Write a Java program which performs file copy.

Solution:

```
package Student;
import java.io.*;
public class FileCopy {
    public static void main(String[] args) {
        String source = "C:\\Users\\narendrakumar.s\\Documents\\source.txt";
        String destination = "C:\\Users\\narendrakumar.s\\Documents\\destination.txt";
        try (FileInputStream fis = new FileInputStream(source);
            FileOutputStream fos = new FileOutputStream(destination)) {
            byte[] buffer = new byte[1024];
            int length;
            while ((length = fis.read(buffer)) > 0) {
                fos.write(buffer, 0, length);
            }
            System.out.println("File copied successfully!");
        } catch (IOException e) {
            System.out.println("Error copying file: " + e.getMessage());
        }
    }
}
```

Output:

4. Write a python program to find the number of lines, words and characters in a file.

Solution:

```
def file_statistics(filename):  
    lines = words = characters = 0  
  
    with open(filename, "r", encoding="utf-8") as f:  
        for line in f:  
            lines += 1  
            words += len(line.split())  
            characters += len(line)  
  
    print(f"Lines: {lines}")  
    print(f"Words: {words}")  
    print(f"Characters: {characters}")  
  
filename = input("Enter filename: ")  
file_statistics(filename)
```

Output:

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

PS C:\Users\narendrakumar.s\Desktop\website> & "C:/Program Files/Python312/python.exe" c:/User
Enter filename: C:\Users\narendrakumar.s\Desktop\website\python\readme.txt
Lines: 1
Words: 11
Characters: 57
PS C:\Users\narendrakumar.s\Desktop\website> |
```
