

Name: Narendra Kumar S

Date : 28-08-2025

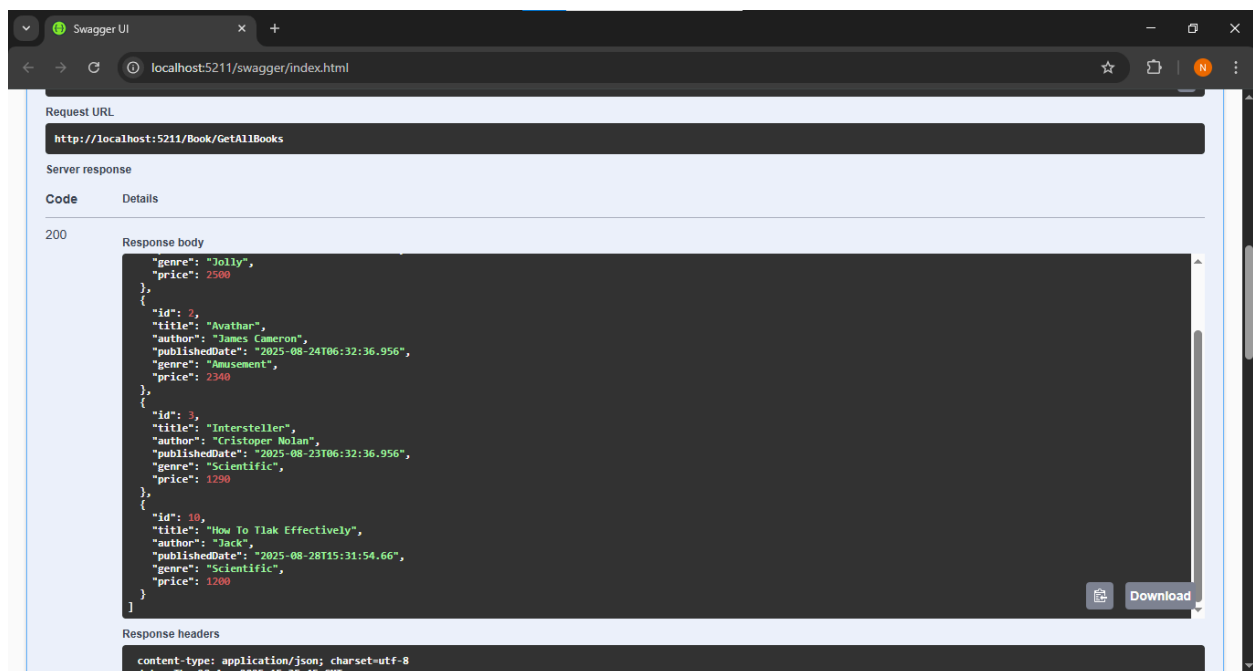

Task:

1.Delete Api

```
delete() {  
  this.bookService.deletebook(10).subscribe({  
    next: (response) => {  
      console.log("Book deleted successfully:", response);  
      this.bookService.getallbook().subscribe(  
        books => this.my_fav_book = books  
      );  
    },  
    error: (err) => {  
      console.error("Error deleting book:", err);  
    }  
  });  
}
```

Output:

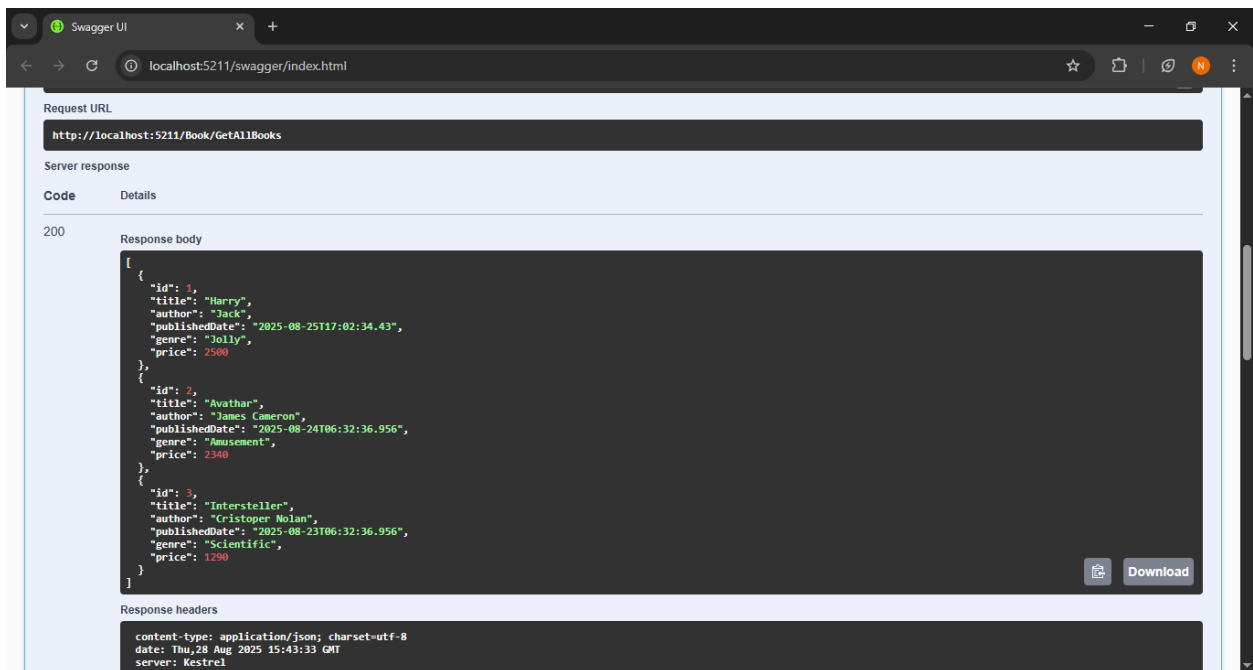

Before Deleteing The Records :

After Deleting the Records :

```
status: 200
statusText: "OK"
url: "http://localhost:5211/Book/DeleteBook/10"
[[Prototype]]: HttpResponseBase
```

2. Printing the nested Json

Solution:

```
customerName: string = "";

getBalance(name: string) {
  this.bookService.print(name).subscribe({
    next: (response) => {
      this.customerData = response;
      console.log("Customer Balance Data:", this.customerData);
    },
    error: (err) => {
```

```

        console.error("Error fetching balance:", err);
    }
    });
}

```

HTML:

```

<input type="text" [(ngModel)]="customerName" placeholder="Enter customer
name">
<button (click)="getBalance(customerName)">Get Balance</button>

<div *ngIf="customerData">
    <h3>Customer: {{ customerData.Customer }}</h3>
    <h4>Total Balance: {{ customerData.TotalBalance }}</h4>

    <h4>Accounts:</h4>
    <ul>
        <li *ngFor="let acc of customerData.Accounts">
            Account No: {{ acc.AccountNumber }} - Amount: {{ acc.Amount }}
        </li>
    </ul>
</div>

<br>
<button (click)="delete()">Delete</button>

```

Service:

```

import { Injectable } from '@angular/core';
import { Place } from '../Models/Place.interface';
import { HttpClient, HttpHeaders } from '@angular/common/http';
import { book } from '../Models/book.interface';
import { bookentry } from '../Models/bookentry.interface';
import { CustomerResponse } from '../Models/customer.interface';

```

```

@Injectables({
  providedIn: 'root'
}))

export class BookService {
  private apiUrl = "http://localhost:5211/Book";
  private apiUrl2 ="https://localhost:7207/api/Customer";

  constructor(private http:HttpClient) { }

  myFavPlaces: Place[] = [
    { name: "Kumbakonam", elevation: "53" },
    { name: "Coimbatore", elevation: "411" }
  ];

  print(name:string) {
    return
this.http.get<CustomerResponse>(`${this.apiUrl2}/Balance/${name}`);
  }

  deletebook(id:number) {
    return this.http.delete<string>(`${this.apiUrl}/DeleteBook/${id}`)
  }

  addbook(bookentry:bookentry) {
    const header = new HttpHeaders().set(
      'content-type','application/json'
    ).append('Authorization','Bearer
eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJodHRwOi8vc2NoZWlhc2FwLm9yZy93cy8yMDA1LzA1L2lkZW50aXR5L2NsYWltcy9uYW11IjoiaTJmFyZW4iLCJQYXNzd29yZCI6IjhhbnNjY3NmU1YjU0MTA0MTViZGU5MDhiZDRkZWUxNWRmYjE2N2E5Yzg3M2ZjNGJiOGE4MmY2ZjJhYjQ0OGE5MTgiLCJleHAiOjE3NTYzNzY2OTgsImh0dHBzOi8vd3d3LnBheW9kYS5jb20iLCJhdWQiOiJ0dGVkZW50c19DU2hhcnAifQ.A-jMsBNQwNV4srLskNOBYu3Pnbk6JVnAPx-7f2OR0DE')

    console.log("Before Bring the actual Api call");

    return
this.http.post<bookentry>(`${this.apiUrl}/AddNewBook`,bookentry,{headers:h
eader})
  }

```

```

getallbook() {
    return this.http.get<book[]>(`${this.apiurl}/GetAllBooks`)
    // .subscribe(
    //     Response=>{
    //         console.log(Response);
    //     },
    //     error =>{
    //         console.error(error);
    //     }
    // );
}

getallplace() {
    return this.myFavPlaces;
}

getFavPlace() {
    return "This is your Favourite Place"
}
}

```

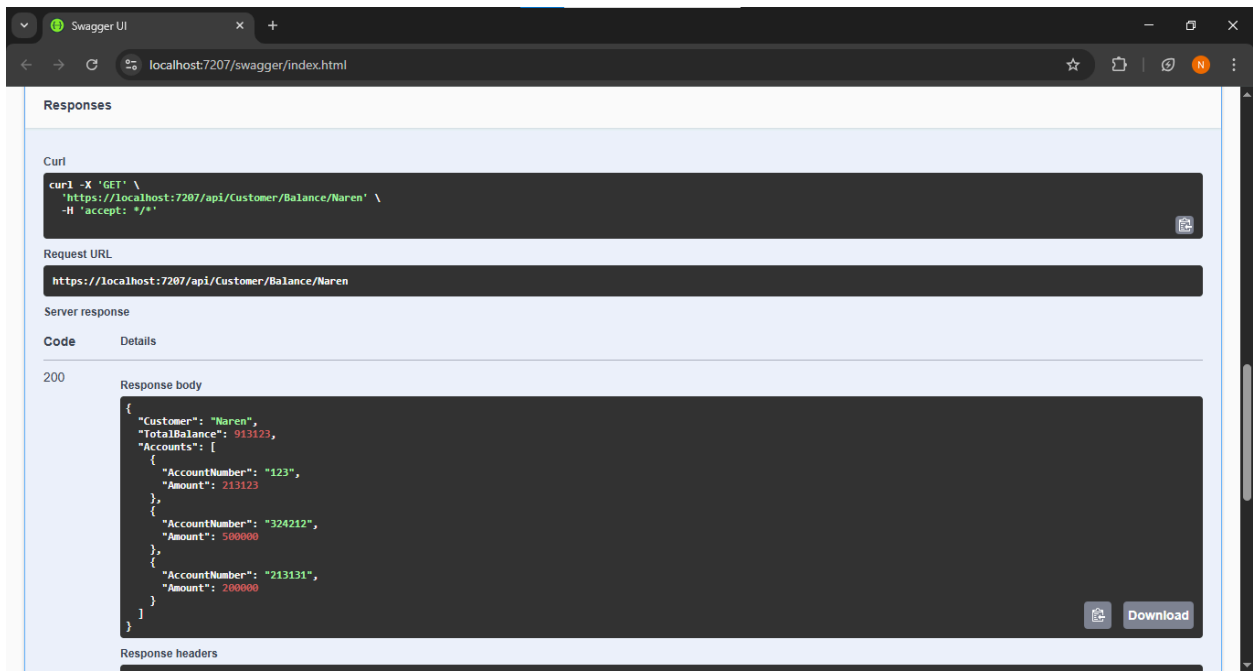

Output of Swagger Api :

Response body

```

{
  "Customer": "Naren",
  "TotalBalance": 913123,
  "Accounts": [
    {
      "AccountNumber": "123",
      "Amount": 213123
    },
    {
      "AccountNumber": "324212",
      "Amount": 500000
    },
    {
      "AccountNumber": "213131",
      "Amount": 200000
    }
  ]
}

```

Output in the Angular :
